

## THE DOGS OF WAR (\$DOGW)

---

Litepaper v3.0 ·	13 February 2026
Presale Opens:	23rd February 2026
Token Launch:	10 April 2026
Listing Price:	To be confirmed prior to exchange listing

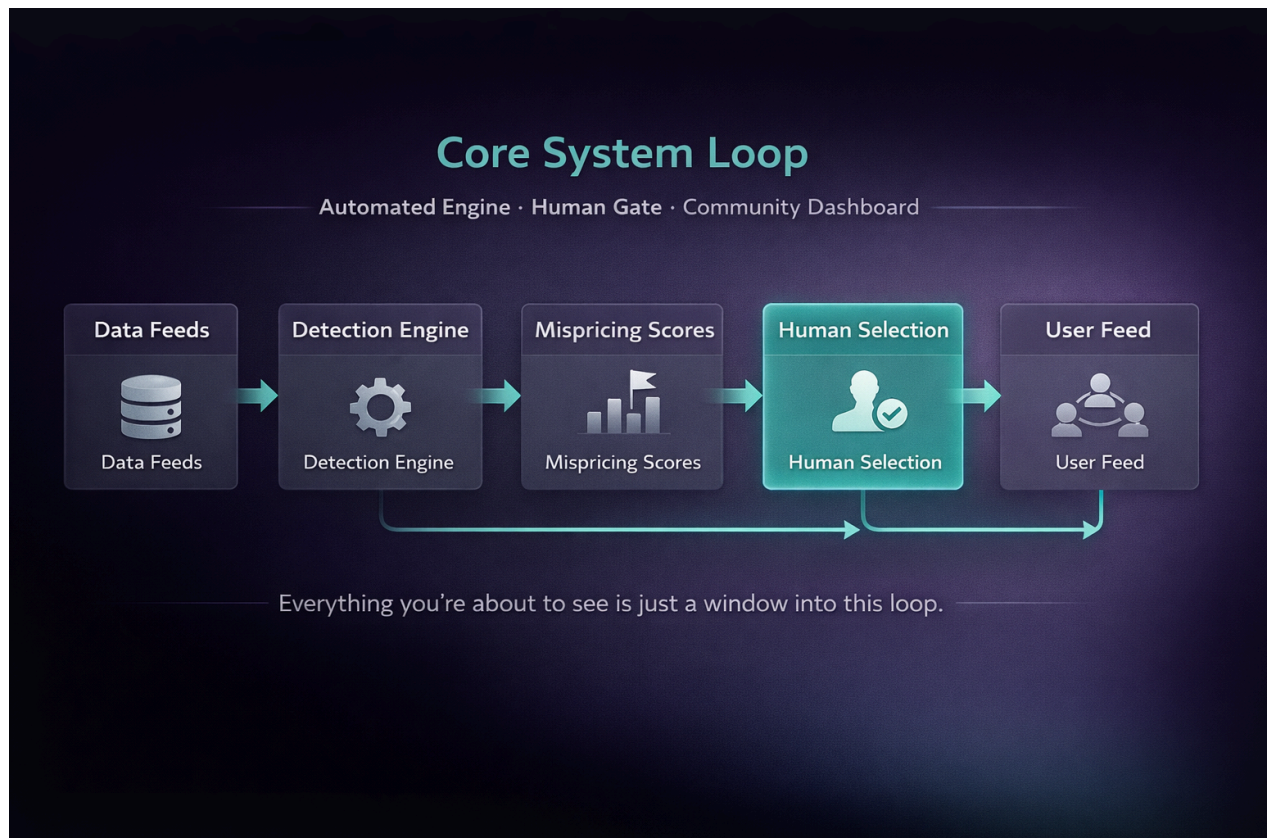

## Executive Summary

The Dogs of War (\$DOGW) more commonly known as the WarDogs project - is a structured football market intelligence ecosystem built around identifying price inefficiencies in the most liquid global football markets.

Its unique Pointers' system combines automated mispricing detection with a human validation gate to ensure disciplined output. It scans high-liquidity market feeds in real time to identify structural price divergence.

## The Core Concept

Pointers' job is to immediately identify structural price inefficiencies in the most liquid football (and ultimately sports) prediction markets globally. Automation flags potential mispricing. Human gatekeeping selects what matters. Output is selective, disciplined, and transparently tracked.

*The Pointers' engine does not publish volume. It filters for structural price divergence in high-liquidity markets. Human selection prevents automation bias.*

## Global Sports is a Gigantic Market Opportunity

*Sport has become one of the most liquid speculative markets in the world.*

Sportsbooks process over \$300 billion annually — and growing.

Prediction markets are accelerating that expansion.

They surpassed \$44 billion in 2025, with January 2026 alone tracking at over \$16 billion.

Football accounts for nearly 40% of that activity.

The capital is there. The liquidity is real. But liquidity doesn't equal clarity.

Most platforms optimize for engagement. Most tipsters optimize for volume. Very few optimize for price.

The WarDogs optimize for price.

## Market Focus

The Pointers platform operates exclusively in:

- 1X2 markets
- Asian Handicap markets

These are the most liquid football markets globally.

Liquidity matters.

It creates price integrity. It reduces distortion. It makes inefficiency meaningful.

The WarDogs do not operate in novelty markets.

The WarDogs operate where price actually matters.

## Pointers' Engine Structure

Data feeds → Detection engine → Mispricing score → Human selection → Publication → Tracking.

Automation identifies structural divergence. Human selection prevents automation bias.

Prediction markets and sportsbooks reflect sentiment en masse in real time.

They are price discovery mechanisms — not signal filters.

## Early Engine Validation

Pointers can be applied to an individual client account. Or large batches of odds. Here is one example. [Past performance is not indicative of future results.]

- 161 tracked selections (since 24 Dec 2025)
- 10.5% return on recent stakes
- Exclusive focus on 1X2 & Asian Handicap markets

**Pointers' Profit is coming from price, not prediction accuracy.**

**Case snapshot (anonymous client)**

- Since 24.12.25 starting Underdog strategy
  - **161 bets**
  - **10.3% Return on Stakes**
- February so far
  - **75 bets**
  - **10.5% RoS**

**Not about winning often.  
About winning properly.**

**POINTERS**

## Solana-based Token Utility

Whilst the token ecosystem is generally distracted by market price, the functional use case for rewards has never been of greater importance for those using such markets.

As such, \$DOGW is a participation, access and rewards token all-in-one. It is not equity and does not guarantee returns.

Utility includes:

- Access to signal tiers
- Governance participation
- Reward pool eligibility
- Founder recognition
- Future ecosystem privileges

## Charter Member Presale

Presale runs from 23rd February 2026 until token launch on 10 April 2026.

Staged pricing:

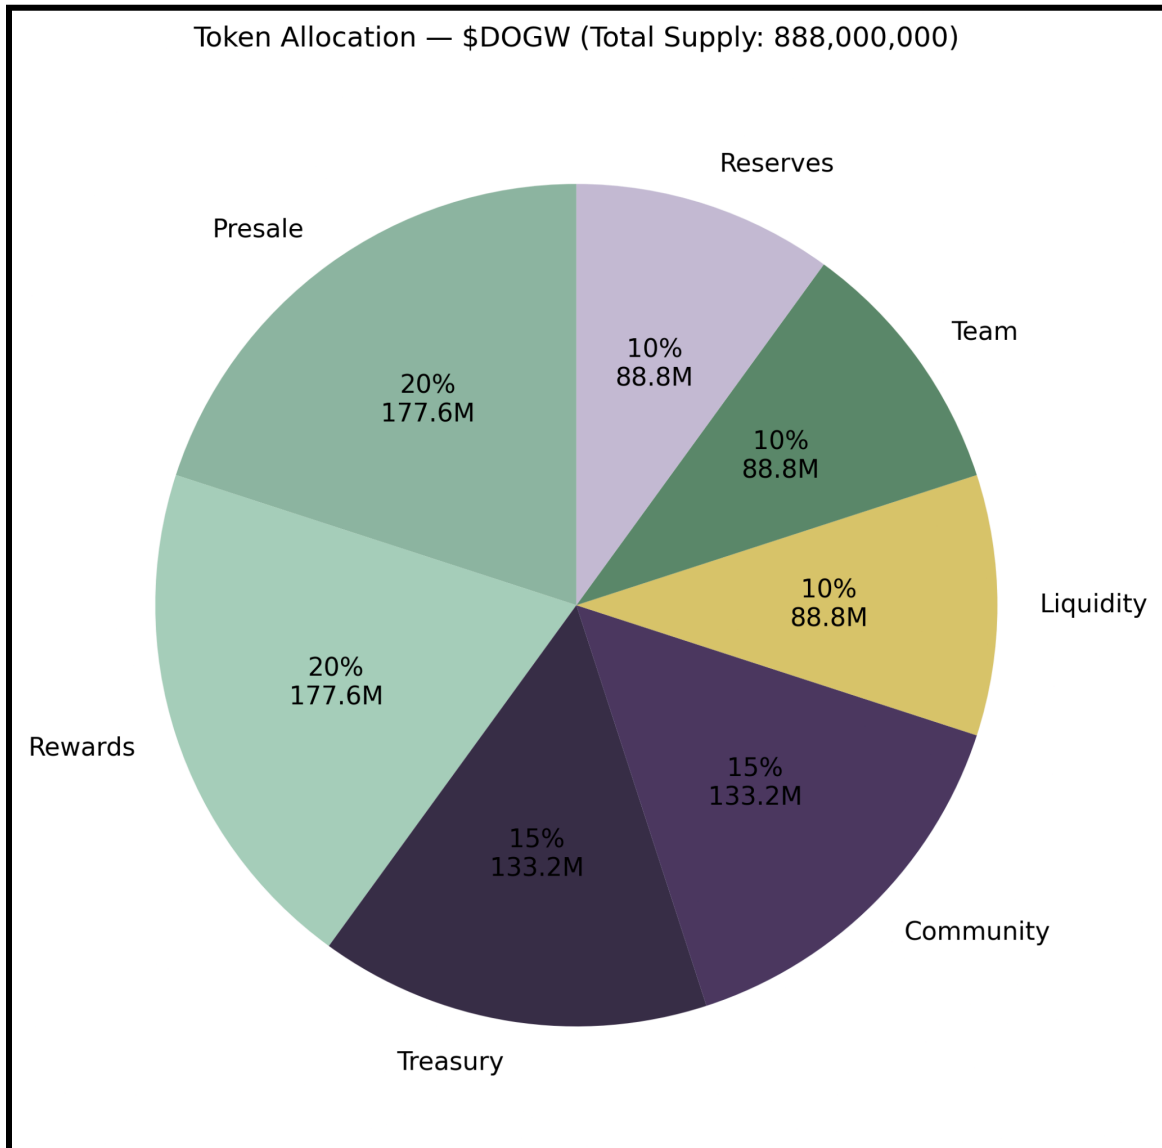

- Phase 1 – \$0.0027
- Phase 2 – \$0.0038
- Phase 3 – \$0.0053

## Distribution: Via the Sablier Platform

Sablier is a decentralized finance (DeFi) platform that enables real-time, on-chain token distribution through smart contracts. It allows DAOs, businesses, and individuals to stream Solana tokens continuously over time—such as for presale token vesting, airdrops, rewards or project grants—without intermediaries.

## Token Supply

Total Supply: 888,000,000 \$DOGW

## Revenue Model

WarDogs monetises discipline — not volume.

Access to premium signal distribution is structured through subscription tiers under the WinWithMe brand. Signal distribution is subscription-based. No copy trading. No pooled capital.

*Disclaimer: This document is for informational purposes only and does not constitute financial advice or an offer of securities. [dogsofwar.ai](https://dogsofwar.ai)*

**Two primary pathways:**

- Annual Access — \$100 per year
- Lifetime Access — \$1,000 one-time

Lifetime access is capped and positioned as a founder-tier privilege.

Distribution may be facilitated via established creator platforms (e.g., Winible) to ensure payment security, access control, and transparent subscriber management.

Revenue is reinvested into:

- Data infrastructure
- Model refinement
- Liquidity provisioning
- Development of the Pointers dashboard
- Operational compliance

**The Final Score**

Sport is liquid.

Markets are efficient.

Edges are thin.

That is precisely why discipline matters.

Pointers' hunts structural price divergence in the most liquid markets in global sport.

Automation finds opportunity.

Human selection applies restraint.

\$DOGW aligns participation with that discipline.

The edge is not about prediction.

It is always about price.
